The next factor to consider is the top prize. Here you'll find a huge variation between different slots. Some have quite small top prizes, say 1,000 coins, while other have big top payouts, like 15,000 to 50,000 coins. To translate that into real money you take the value of the coin you are better (let's say \$1) and multiply it. So you can see that a big paying slot can pay out \$50,000 on a \$100 bet, for example, while a smaller paying slot may only pay out \$1,000 on a \$5 bet. You should also realise that because your bet is higher with the top paying slots, you risk losing more money while trying to hit the big prize, so make sure that you take that into account.
